

Leap into the Future!

Nordic Backup has delivered secure online storage to thousands of small and large companies worldwide since 2003. We're looking forward to serving your business and protecting your companies' valuable files.

Providing Secure Online Storage over the internet.
This state-of-the-art file backup system spares you the work of changing and storing backup tapes, burning DVDs or copying your files to external hard drives. Nordic Backup is fully automatic, so you no longer need to worry about your day-to-day backup requirements.

You only have two requirements:

- Internet Connection
- Nordic Backup

Companies of every size and industry, and individuals as well, can benefit from Nordic Backup. We are a market leader, safeguarding data that ranges from a single gigabyte to thousands of gigabytes.

No compromise when it comes to security.
Your files are stored in multiple geographically separate data centers, on redundant servers with a duplicate storage system. This is to ensure that your backup is stored not only at one location, but in two, with exact copies at each location.

Both data centers are equipped with three levels of physical access control, with alarms, camera surveillance, locked server cabinets, uninterruptible power supplies, diesel powered generators, multiple cooling and Gigabit Internet connections.

Before your files are sent to Nordic Backup, they are encrypted with 256 bits on your own computer with a secure encryption key that only you know. The encrypted files are then sent to Nordic Backup via an encrypted SSL tunnel. This means that your files are encrypted twice during the transfer to Nordic Backup.

Your data is the most important assets of your company.
Nordic Backup is an easy-to-use and cost-effective backup and disaster recovery solution specifically designed for businesses. If your company is backing up data on-site, i.e. within your office premises, your data is vulnerable if an accident strikes. Therefore, the most effective method to protect your data is to store your data offsite. We highly recommend you use Nordic Backup Online Backup Service.

- Benefits:**
- 24/7 Fully Managed Service
 - 256-Bit Military-Grade Encryption
 - Restore Your Data Anytime
 - Highly Secure and Controlled Datacenters
 - Comprehensive Backup Features Provided by Nordic Backup Software
 - Backup Data is stored in two geographically separate data centers
